Advanced Care for life

Finally, compression wear that's

Easy

Effective

Affordable

*CompreSleeve*TM

CompreSleeve™

Most patients with Lymphedema, or other forms of edema, do not require custom compression garments. Designed specifically for those patients that have standard measurements, BiaCare Medical has designed standard compression wear to make your life a little easier.

Comfortable

The comfortable CompreSleeve™ is made with a cotton (95%) lycra (5%) blend fabric, providing a soft, slim fit with a one-way short stretch that closely resembles bandage wrapping. The latex-free WaveFoam™ (for directional medial to lateral fluid evacuation) liner helps provide Hi-Lo pressure for improved fluid drainage

Effective

Gentle, gradient compression is achieved with unique (patent-pending) SeamAdjust™ feature. Now, as you arm changes in size, simply adjust the tabs where increased or decreased compression is needed

Economical

The CompreSleeve™ costs less than other national brands offering similar compression and lasts longer than bandages. The CompreSleeve™ also saves hundreds of hours per year when compared to wrapping/re-rolling bandages.

Easy to Use and Adjust

The CompreSleeve™ can be donned in seconds by loosening the seam at the wrist area and sliding your hand through.

Machine wash and dry (no heat) means the CompreSleeve™ is very easy to keep clean.

Why CompreSleeve™ may be the best choice for you...

- **Simple Adjustments**
Unique SeamAdjust™ system ensures a correct fit as limb volume decreases
- **Economical**
Saves time and money
- **Effective**
*Provides gentle, gradient compression
WaveFoam™ liner for Hi-Lo pressure*
- **Easy Care**
Machine wash and dry
- **Easy Use**
Slides on and off easily and adjusts in seconds
- **Non-Elastic Compression**
Effective for day and nighttime
- **Comfortable**
*Soft one-way stretch cotton
100% latex-free WaveFoam™ liner*
- **Durable**
Lasts 2-3 times longer than bandages

The CompreSleeve™ was introduced in early 2007 as a nighttime compression sleeve for patients needing mild to moderate compression (20-30 mmHg gradient compression). It is made with cotton.lycra fabric that has a short, one-way stretch which mimics the effects of bandage wrapping. the Velcro® tabs along the seam allow for a perfect fit every time. A donning loop is included for simple donning/doffing. The CompreSleeve™ can be machine washed and dried.
